

JADEBLAST

FIND OUT WHY INDUSTRY EXPERTS ARE IMPRESSED!

Ideal for outside and blast to waste jobs - Fast, Economic, Clean and Green!

- **Completely Natural**
- **Non Toxic**
- **Free From Heavy Metals**
- **Free From Radioactive Contaminants**
- **Free From Silicosis Hazard - less than 0.5% Free Silica**

- **Dark Coloured**
- **Low Cost**
- **Fast**
- **Low Dust (compared with other low cost abrasives)**
- **Low Chloride – Less than 15ppm**

Jadeblast is produced by the world's largest producer of Industrial Garnet – The G.M.A Garnet group. Jadeblast is processed to the highest standard of quality to meet strict G.M.A in-house quality standards, in respect of mineral purity, chloride levels and free silica levels. This unique blend of Pyroxene and Almandite Garnet, both known for natural hardness, durability and abrasive characteristics has a superior cutting speed and surface profile to any other common low cost abrasive. The blasted surface is free of embedment's and rogue peaks, SA 2.5-SA3 white metal is achieved and an even surface profile of 45-55 microns.

HERE'S WHAT OTHER BLASTERS ARE SAYING!

We are more than impressed with this product, we have recently used it for a large site job. Initially we only purchased because of the dark colour but it quickly became apparent that it had more advantages than that, the pot ran for longer, the surface was impressively clean and best still we used a lot less abrasive on the job than anticipated. **A.P. - June 2011**

Jadeblast is a perfect abrasive for site work, the colour is great and it performs a lot better than any other budget abrasive option, saving time and money on site work.

C.R. - July 2011
